Sustainable Development in Communities

Workshop & Exhibit

Monday November 26, 2007

- Organized by Energy Studies Review
of McMaster University's
DeGroot School of Business

Sustainable Development

- Emphasize on interacting with end-use customer
- A way of thinking in a broader picture
- Taking the more encompassing approach to energy production, consumption, conservation and overall community design while meeting the needs of today and of future generations

Three general policy areas:

- Environmental
- Social
- Economic

Environment

- Encourage energy efficiency
- Reduction of greenhouse gas emissions
- Less waste and management of waste
- More recycling

Social

- Education
- Promotion of Sustainable Practices
- Community Outreach
- Behavioral Changes
- Community Planning

Economic

- Economic and technological solutions that address climate change, air quality, and clean water issues
- New economic systems and markets, some more decentralized and others more integrative
- A business case for sustainable development
